NaTAA Gambia — Website Design & Features

Prototype direction for the NaTAA Gambia digital platform

NaTAA Gambia

NaTAA Gambia is the **Public digital layer for The Gambia's National Tourism Assets Registry**: a platform where tourism assets can be easily discovered by tourists through structured digital profiles.

Who it is for

NaTAA is designed for **both local and international tourists**, making it easier to discover and explore The Gambia beyond the same well-known hotspots. The platform should encourage genuine exploration of the country — **from the coast to the frontier, including rural communities and lesser-known tourism assets** — by making these places easier to find, understand and visit.

Website concept

The website should feel like a modern national tourism discovery platform: visual, simple, map-based and easy to explore. The main experience is **Explore** → **Map** → **Asset Profile**.

Main website features

• Homepage with NaTAA branding, search and featured tourism assets
• Explore page showing tourism assets across The Gambia
• Interactive map with searchable tourism assets
• Tourism-theme browsing and filtering
• Individual asset profiles with photos, location, description, themes and visitor information
• Search by place, asset or experience
• Mobile-friendly design
• Future connection to the national tourism asset registry/backend

Tourism themes

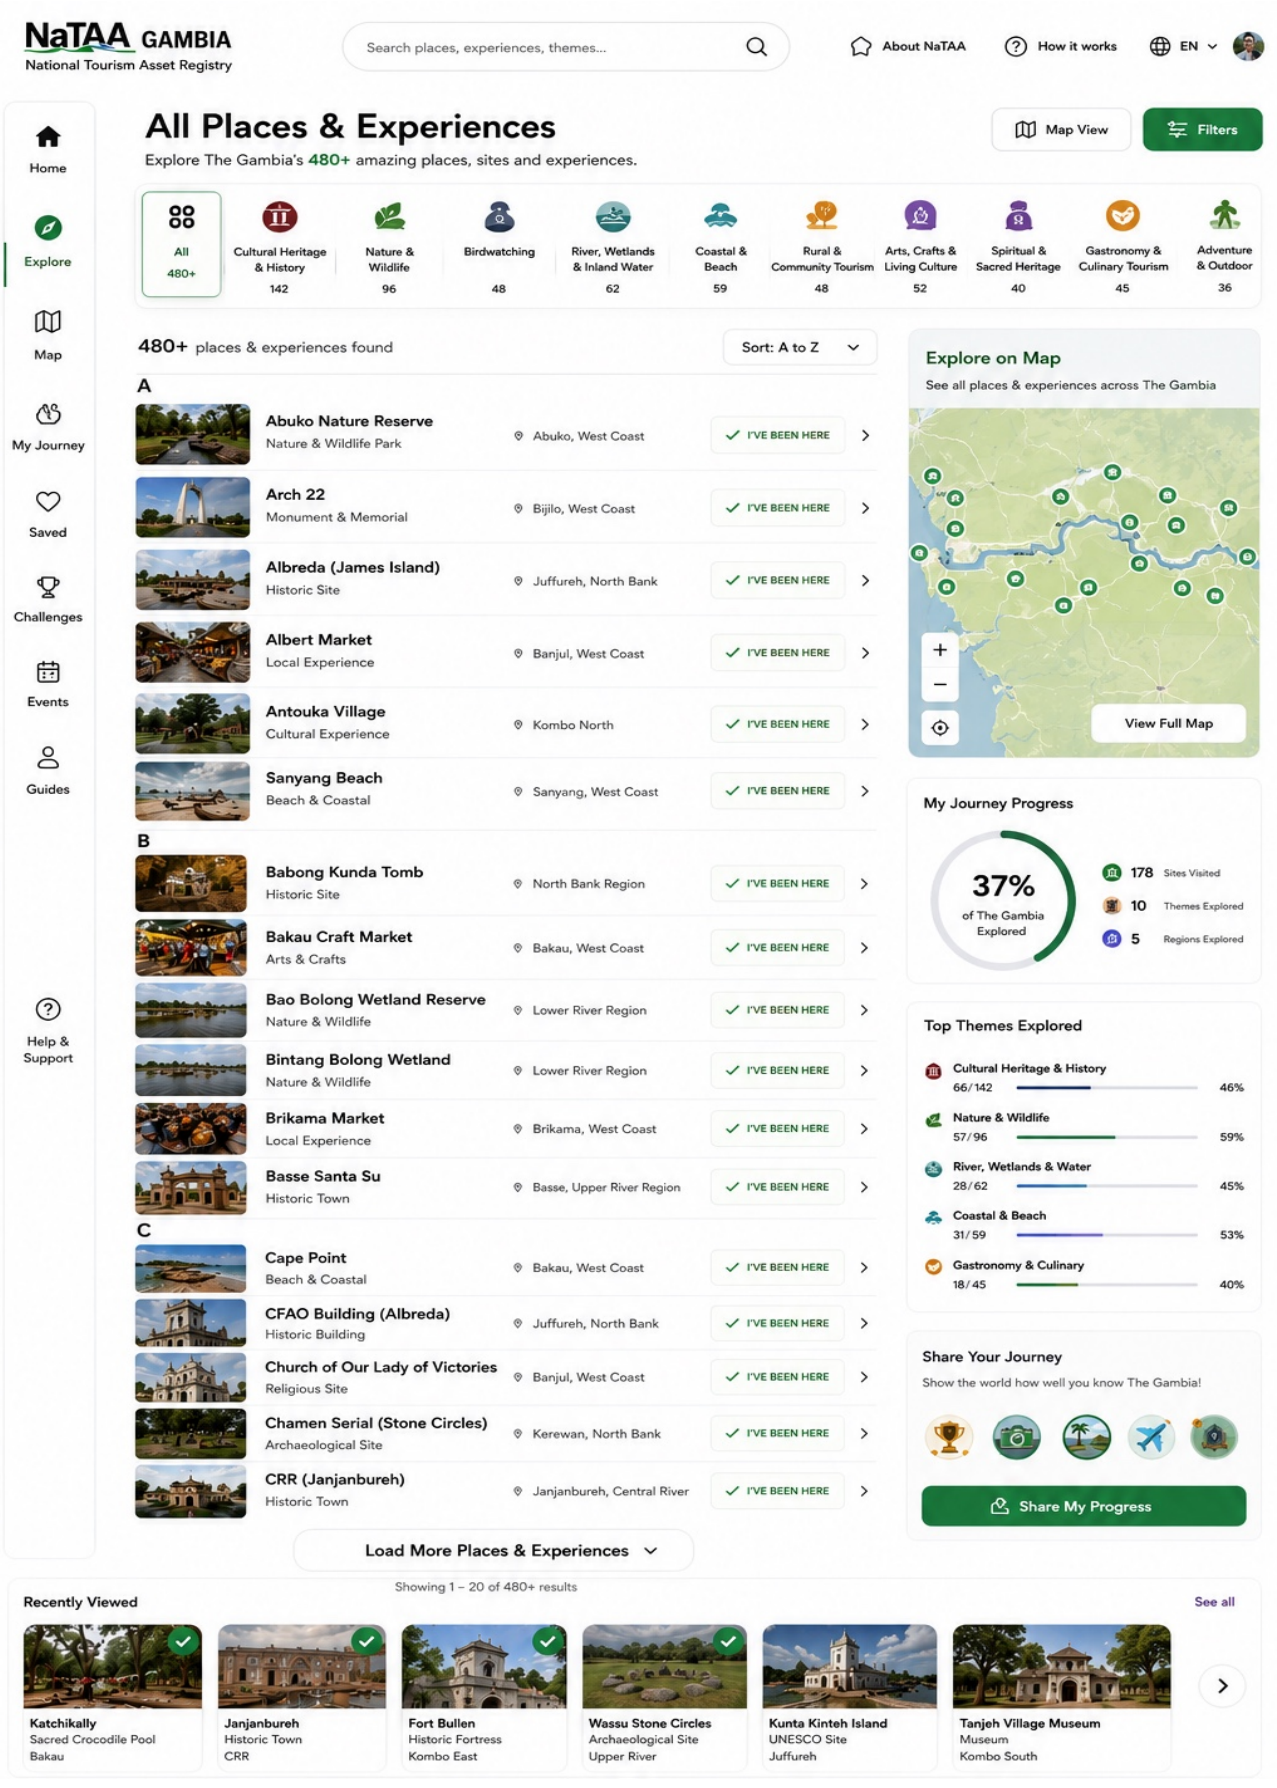

The Explore experience should allow users to browse the 10 NaTAA tourism themes: Cultural Heritage & History; Nature & Wildlife; Birdwatching; River, Wetlands & Inland Water; Coastal & Beach; Rural & Community Tourism; Arts, Crafts & Living Culture; Spiritual & Sacred Heritage; Gastronomy & Culinary Tourism; Adventure & Outdoor Tourism.

Classification system

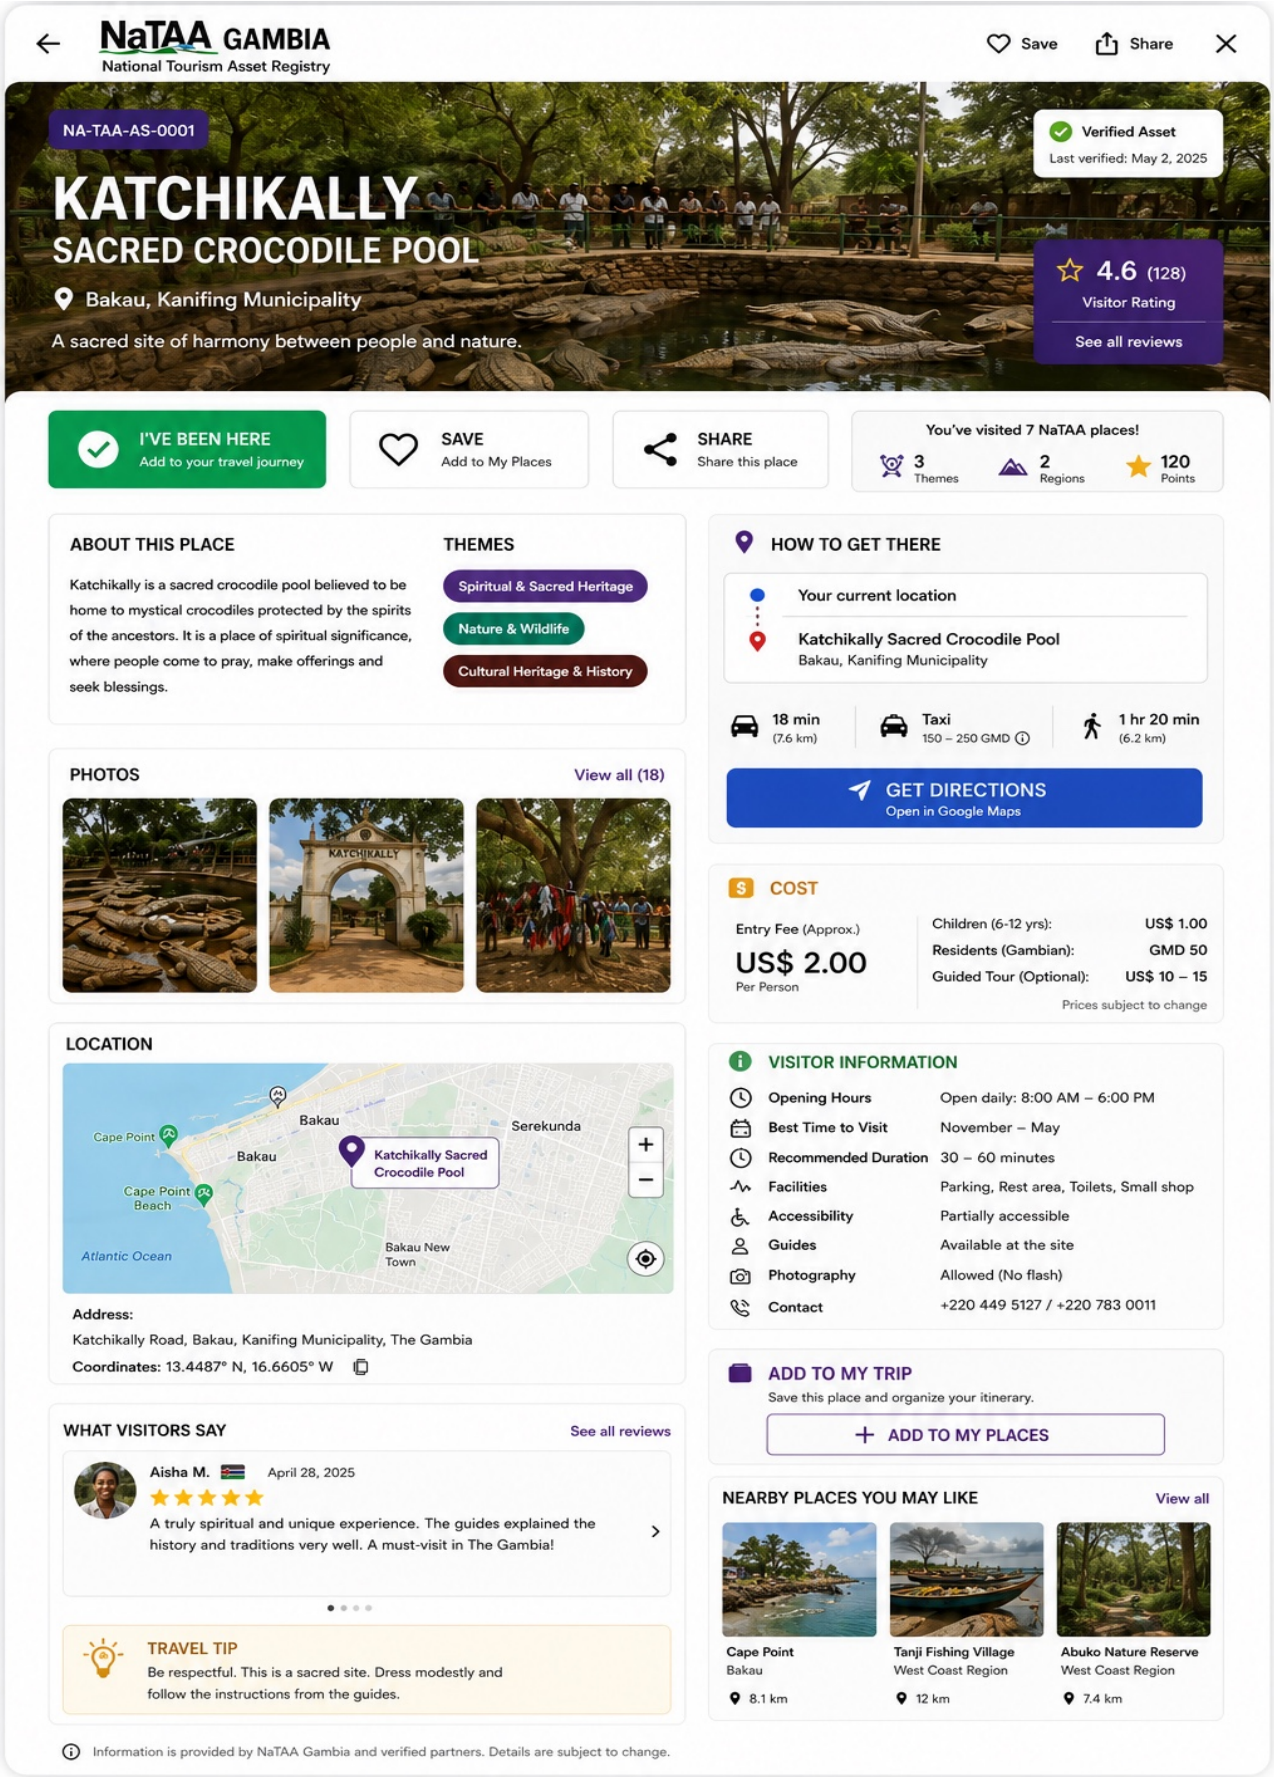

Each tourism asset record should include its NaTAA classification/status. The public-facing prototype should clearly display the three classification levels: **GOLD**, **PLATINUM** and **DIAMOND**. Classification should appear on asset profiles and can also be used as a map/filter option.

Classification	Website treatment
GOLD	Recognised NaTAA classified asset.
PLATINUM	Higher-level NaTAA classified asset.
DIAMOND	Highest NaTAA classification level.

Theme Map — Gastronomy & Culinary Tourism

Theme Map — Cultural Heritage & History

Cultural Heritage & History Explorer

Prototype priority

First build: focus on the visual website experience and core user journey. Demonstrate the homepage, Explore page, interactive map, tourism themes, Gold/Platinum/Diamond classification filters and an individual asset profile using Katchikally as the example. The backend/database and integrations can be connected later.

Key idea: **NaTAA makes the full diversity of The Gambia easier to discover — not only established hotspots, but also lesser-known sites, experiences and rural communities from the coast to the frontier.**
